Sender address:

I, __________________________________________, am making the following objection on my own behalf.

I object to the granting of Application FS006566, “Application for a Foreshore Lease for the Construction of an Offshore Electricity Generating Station” on the following grounds:

- EU and Irish Law sets out a process whereby any development likely to have significant effects on the environment cannot be exempt from an EIA, unless a comprehensive screening of the project with regard to its potential impacts on the receiving environment rules out the need for an EIA. This proposed development has not been adequately screened, as required by law. The size, nature, and location of the project must be considered in determining if an EIA is required and this has not been done.
- This project is part of a larger development including Application FS005751, Application FS006611 and Galway County Council Application 13/947. The intention of the EIA Directive is that no project likely to have significant effects on the environment should be exempt and project splitting cannot be used to circumvent the intention of the Directive.
- The cumulative impacts of FS006566, together with the above applications and other developments on the receiving environment of Galway Bay have not been included at the screening stage and therefore have not been assessed as required by law.
- I have been deprived of an Environmental Impact Statement and therefore do not have the information I need to assess the impact this development will have on my quality of life, my health and wellbeing. This application does not provide any External Bodies Consultation Information from an independent Environmental NGO to inform me or the Minister deciding on this application.
- The impacts of the proposed development on the sensitive area of Galway Bay, its legally protected species and Habitats, have not been Appropriately Assessed as required by law.
- I do not understand why Tourism has not been considered in this application. The impact on tourism has implications at National and Local level in terms of revenue, employment and rural depopulation.
- I have not been properly informed and I have not been consulted and included in the decision making process with regard to this application as required under the Aarhus Convention.
- Due to the manner in which the public consultation process has been conducted, I have been deprived of my democratic right to representation by my elected public representatives during a large part of the consultation period. Questions not answered at a public meeting on the 21st of July regarding this application, the day the Dáil closed, remain unanswered. My public representatives are largely unavailable and are in any case without a forum in which to raise my questions and receive answers I can rely on. Requests by my representatives to remedy this situation have not been granted by the Minister responsible.
- I do not understand why a 35 year Lease is being considered because, if granted, it will shackle future Governments, and subject the public and generations to follow with unassessed and unimagined consequences.

Therefore, I ask the Minister to refuse to grant this application.

Signed, __________________________________________

A Chara,

I, am making the following objection on my own behalf.

I object to the granting of Application fs006566 in Spiddal because I do not agree with the 35 year lease being considered. Most of the applicants will be retired and in a nursing home like myself and how are they going to oversee this development.

I was never informed about the original application especially when I did not know that I have no right to fish or sail or row a boat in this area.

I have not seen an Environmental Impact Statement and cannot assess the damage this station may cause to Galway Bay.

I fear that Galway Bays beauty and natural habitats may be affect by this development and therefore object strongly to it going ahead,

I ask the Minister to refuse to grant this application,

Mise le meas,
A Chara,

I, am making the following objection on my own behalf.
I object to the granting of Application fs006566 in Spiddle because I do not agree with the 35 year lease being considered.
Also I live along the coast where this offshore station is being considered and was neither informed or approached about it.
I fear that Galway Bays beauty and natural habitats may be affect by this development and therefore object strongly to it going ahead,
I ask the Minister to refuse to grant this application,

Mise le meas,

- This project is part of a larger development including Application FS005751, Application FS006611 and Galway County Council Application 13/947. The intention of the EIA Directive is that no project likely to have significant effects on the environment should be exempt and project splitting cannot be used to circumvent the intention of the Directive.
- The cumulative impacts of FS006566, together with the above applications and other developments on the receiving environment of Galway Bay have not been included at the screening stage and therefore have not been assessed as required by law.
- I have been deprived of an Environmental Impact Statement and therefore do not have the information I need to assess the impact this development will have on my quality of life, my health and wellbeing. This application does not provide any External Bodies Consultation information from an independent Environmental NGO to inform me or the Minister deciding on this application.
- The impacts of the proposed development on the sensitive area of Galway Bay, its legally protected species and Habitats, have not been Appropriately Assessed as required by law.
- I do not understand why Tourism has not been considered in this application. The impact on tourism has implications at National and Local level in terms of revenue, employment and rural depopulation.
- I have not been properly informed and I have not been consulted and included in the decision making process with regard to this application as required under the Aarhus Convention.
- Due to the manner in which the public consultation process has been conducted, I have been deprived of my democratic right to representation by my elected public representatives during a large part of the consultation period. Questions not answered at a public meeting on the 21st of July regarding this application, the day the Dáil closed, remain unanswered. My public representatives are largely unavailable and are in any case without a forum in which to raise my questions and receive answers I can rely on. Requests by my representatives to remedy this situation have not been granted by the Minister responsible.
- I do not understand why a 35 year Lease is being considered because, if granted, it will shackle future Governments, and subject the public and generations to follow with unassessed and unimagined consequences.

Therefore, I ask the Minister to refuse to grant this application.

Signed,

Sender address:

I am making the following objection on my own behalf.

I object to the granting of Application FS006566, “Application for a Foreshore Lease for the Construction of an Offshore Electricity Generating Station” on the following grounds:

- EU and Irish Law sets out a process whereby any development likely to have significant effects on the environment cannot be exempt from an EIA, unless a comprehensive screening of the project with regard to its potential impacts on the receiving environment rules out the need for an EIA. This proposed development has not been adequately screened, as required by law. The size, nature, and location of the project must be considered in determining if an EIA is required and this has not been done.
- This project is part of a larger development including Application FS005751, Application FS006611 and Galway County Council Application 13/947. The intention of the EIA Directive is that no project likely to have significant effects on the environment should be exempt and project splitting cannot be used to circumvent the intention of the Directive.
- The cumulative impacts of FS006566, together with the above applications and other developments on the receiving environment of Galway Bay have not been included at the screening stage and therefore have not been assessed as required by law.

I, , am making the following objection on my own behalf.

I object to the granting of Application FS006566, “Application for a Foreshore Lease for the Construction of an Offshore Electricity Generating Station” on the following grounds:

- EU and Irish Law sets out a process whereby any development likely to have significant effects on the environment cannot be exempt from an EIA, unless a comprehensive screening of the project with regard to its potential impacts on the receiving environment rules out the need for an EIA. This proposed development has not been adequately screened, as required by law. The size, nature, and location of the project must be considered in determining if an EIA is required and this has not been done.
- This project is part of a larger development including Application FS005751, Application FS006611 and Galway County Council Application 13/947. The intention of the EIA Directive is that no project likely to have significant effects on the environment should be exempt and project splitting cannot be used to circumvent the intention of the Directive.
- The cumulative impacts of FS006566, together with the above applications and other developments on the receiving environment of Galway Bay have not been included at the screening stage and therefore have not been assessed as required by law.
- I have been deprived of an Environmental Impact Statement and therefore do not have the information I need to assess the impact this development will have on my quality of life, my health and wellbeing. This application does not provide any External Bodies Consultation information from an independent Environmental NGO to inform me or the Minister deciding on this application.
- The impacts of the proposed development on the sensitive area of Galway Bay, its legally protected species and Habitats, have not been Appropriately Assessed as required by law.
- I do not understand why Tourism has not been considered in this application. The impact on tourism has implications at National and Local level in terms of revenue, employment and rural depopulation.
- I have not been properly informed and I have not been consulted and included in the decision making process with regard to this application as required under the Aarhus Convention.
- Due to the manner in which the public consultation process has been conducted, I have been deprived of my democratic right to representation by my elected public representatives during a large part of the consultation period. Questions not answered at a public meeting on the 21st of July regarding this application, the day the Dáil closed, remain unanswered. My public representatives are largely unavailable and are in any case without a forum in which to raise my questions and receive answers I can rely on. Requests by my representatives to remedy this situation have not been granted by the Minister responsible.
- I do not understand why a 35 year Lease is being considered because, if granted, it will shackle future Governments, and subject the public and generations to follow with unassessed and unimagined consequences.

Therefore, I ask the Minister to refuse to grant this application.

Signed, ...

Date: 6/9/2016

I reserve the right to add to my submission, should further concerns arise in light of information not presently available to me.
I, ..., am making the following objection on my own behalf.

I object to the granting of Application F5006566, "Application for a Foreshore Lease for the Construction of an Offshore Electricity Generating Station" on the following grounds:

- EU and Irish Law sets out a process whereby any development likely to have significant effects on the environment cannot be exempt from an EIA, unless a comprehensive screening of the project with regard to its potential impacts on the receiving environment rules out the need for an EIA. This proposed development has not been adequately screened, as required by law. The size, nature, and location of the project must be considered in determining if an EIA is required and this has not been done.
- This project is part of a larger development including Application F5005751, Application F5006611 and Galway County Council Application 13/947. The intention of the EIA Directive is that no project likely to have significant effects on the environment should be exempt and project splitting cannot be used to circumvent the intention of the Directive.
- The cumulative impacts of F5006566, together with the above applications and other developments on the receiving environment of Galway Bay have not been included at the screening stage and therefore have not been assessed as required by law.
- I have been deprived of an Environmental Impact Statement and therefore do not have the information I need to assess the impact this development will have on my quality of life, my health and wellbeing. This application does not provide any External Bodies Consultation information from an independent Environmental NGO to inform me or the Minister deciding on this application.
- The impacts of the proposed development on the sensitive area of Galway Bay, its legally protected species and Habitats, have not been Appropriately Assessed as required by law.
- I do not understand why Tourism has not been considered in this application. The impact on tourism has implications at National and Local level in terms of revenue, employment and rural depopulation.
- I have not been properly informed and I have not been consulted and included in the decision making process with regard to this application as required under the Aarhus Convention.
- Due to the manner in which the public consultation process has been conducted, I have been deprived of my democratic right to representation by my elected public representatives during a large part of the consultation period. Questions not answered at a public meeting on the 21st of July regarding this application, the day the Dáil closed, remain unanswered. My public representatives are largely unavailable and are in any case without a forum in which to raise my questions and receive answers I can rely on. Requests by my representatives to remedy this situation have not been granted by the Minister responsible.
- I do not understand why a 35 year Lease is being considered because, if granted, it will shackle future Governments, and subject the public and generations to follow with unassessed and unimagined consequences.

Therefore, I ask the Minister to refuse to grant this application.

I, ..., am making the following objection on my own behalf.

I object to the granting of Application FS006566, “Application for a Foreshore Lease for the Construction of an Offshore Electricity Generating Station” on the following grounds:

- EU and Irish Law sets out a process whereby any development likely to have significant effects on the environment cannot be exempt from an EIA, unless a comprehensive screening of the project with regard to its potential impacts on the receiving environment rules out the need for an EIA. This proposed development has not been adequately screened, as required by law. The size, nature, and location of the project must be considered in determining if an EIA is required and this has not been done.
- This project is part of a larger development including Application FS005751, Application FS006611 and Galway County Council Application 13/947. The intention of the EIA Directive is that no project likely to have significant effects on the environment should be exempt and project splitting cannot be used to circumvent the intention of the Directive.
- The cumulative impacts of FS006566, together with the above applications and other developments on the receiving environment of Galway Bay have not been included at the screening stage and therefore have not been assessed as required by law.
- I have been deprived of an Environmental Impact Statement and therefore do not have the information I need to assess the impact this development will have on my quality of life, my health and wellbeing. This application does not provide any External Bodies Consultation Information from an Independent Environmental NGO to inform me or the Minister deciding on this application.
- The impacts of the proposed development on the sensitive area of Galway Bay, its legally protected species and Habitats, have not been Appropriately Assessed as required by law.
- I do not understand why Tourism has not been considered in this application. The impact on tourism has implications at National and Local level in terms of revenue, employment and rural depopulation.
- I have not been properly informed and I have not been consulted and included in the decision making process with regard to this application as required under the Aarhus Convention.
- Due to the manner in which the public consultation process has been conducted, I have been deprived of my democratic right to representation by my elected public representatives during a large part of the consultation period. Questions not answered at a public meeting on the 21st of July regarding this application, the day the Dáil closed, remain unanswered. My public representatives are largely unavailable and are in any case without a forum in which to raise my questions and receive answers I can rely on. Requests by my representatives to remedy this situation have not been granted by the Minister responsible.
- I do not understand why a 35 year Lease is being considered because, if granted, it will shackle future Governments, and subject the public and generations to follow with unassessed and unimagined consequences. Therefore, I ask the Minister to refuse to grant this application.

Signed,
