

Dear Minister,

1/ In order to assist those monitoring the actual identification process during polling, introduce a requirement that each voter produce their house code as used by An Post.

2/ Electronic voting acquired a dubious reputation when first attempted. However if an electronic vote counting system is used again I suggest it be done in conjunction with the current paper based system .Then if the results are at variance ,the paper results should stand ,until a system is developed that is self evident showing the various counts/transfers in reaching a result.

Thanking You,
Christy Brady
